VEGA DAILY

Vitamins to VEGA !

9th. Jan. 2025

VITAMIN   01

This week, the export market of vitamin B1 was active, with an increase in customer inquiries and active replenishment. As the low-priced supply in the previous market was consumed, the transaction price rose steadily. The current factory signed orders for Vitamin B1 mononitrate at US$31.2 and hydrochloric acid at US$36.4, which is worth paying attention to in the future.

AMINO ACID   02

Lysine: Domestic manufacturers' quotations are stable, export demand is stable, and shipments are the main focus. The overall order signing in the trade market is relatively weak, and prices are stable. The forward order price of 98.5% lysine is slightly lower, and we will continue to pay attention to the progress of the subsequent anti-dumping cases of lysine originating from China by the EU and Brazil.

API   03

Doxycycline hydrochloride: next week, domestic mainstream manufacturers will stop logistics one after another. This week, domestic and foreign customers are actively inquiring in the market. It is judged that there will be a wave of shock adjustments before the Spring Festival. Please pay attention to the intervention of new production capacity. The current market transaction is around USD 46.6/kg.

Jingxin Pharmaceutical announced that the company intends to use its own funds to repurchase the company's shares through centralized bidding transactions. The repurchased company shares will be used for equity incentives or employee stock ownership plans. The total repurchase amount is not less than CNY 200 million (inclusive) and not more than CNY 400 million (inclusive), and the repurchase price is not more than CNY 14.8 per share (inclusive).

FOOD ADDITIVE   04

Recently, affected by market demand, the transaction price of food additive sodium saccharin dihydrate in the foreign market is around USD4.4-4.8/KG. In the short term, the price of anhydrous sodium saccharin will stabilize.
