## VITAMIN

01

The market supply of niacin and niacinamide is tight recently due to the limited supply of some raw materials, which provides strong support for prices. Downstream demand is stable and the domestic transactions of mainstream factories are active with transaction price around \$4.6-4.9/KG. The transaction price in the international market is around \$4.7-4.9/KG. It is expected that the price will remain strong in the short term and it is recommended that buyers arrange procurement plans reasonably to cope with possible price fluctuations.

## AMINO ACID

02

HUAHENG set their current prices for feed grade amino acids as: Valine 1900USD/MT, Tryptophan 6700USD/MT, and Arginine 4050USD/MT.

## API

03

Tylosin and Tilmicosin: mainstream factories are currently actively stopping quotations to maintain prices. The current market inquiry and procurement enthusiasm is at high level.

## FOOD ADDITIVE

04

Affected by market demand, the domestic transaction price of Acesulfame Potassium has risen to 4.8-4.9 USD/KG, and the transaction price in the foreign market is about 4.9USD/KG. The price is expected to rise in the future.
